

20 Seconds is all it took ...and he was gone

"Tragic, unbelievable. I looked astern from the wheelhouse door and noticed the deckie was trying to tell me something. I turned back into the wheelhouse to pull some revs off and then stepped back out onto the deck. I just couldn't believe it, the deck was empty... 20 seconds is all it took and he was gone! We searched all night but we never found him. I was wearing a Stormy Vest but the man overboard was not. No one will ever go to sea again on my boat without one."

(Professional Fisherman off Wilson's Promontory, Australia).

Stormy Inflatable Clothing was developed in response to loss of lives in the professional fishing industry some 15 years ago. Lives were being lost because life jackets were not being

worn. The styles available were bulky and uncomfortable and not designed to be worn while working on board. Stormy Inflatable Personal Flotation Devices (PFD's) are the

ultimate PFD in wearer comfort and in-water performance. Styles include Vest, Jacket and Yoke - all with an integrated inflation system.

Stormy Seas two most popular styles, the Stormy Vest and the Stormy Zip-out Sleeve Jacket are great looking and easy to wear. As with all Stormy PFD's, they incorporate a CO2 activated inflation system. This system, when activated, instantly transforms these garments into an accredited (AS1512) Personal Flotation Device (PFD Type 1).

Stormy Inflatable PFD's save lives because they are worn not stowed.

Safety solutions through advanced technology

The superb EVRsafe gas detection device is a world first. To look at, it appears simple in design. It is only when the full functionality of this unique piece of equipment is explained that you truly appreciate what you are looking at.

The EVRsafe unit is an innovative, integrated, multi gas detection/sensor device for all water-craft. A sleek display unit and tidy sensors enable it to be fitted within any hull design either at time of fit out or as a retro fit.

The unit enables simultaneous detection of multi gases, such as carbon monoxide, butane, LPG, nitrogen dioxide and

hydrocarbons. There is no other unit in the world that has this ability. The unit will alert crew and passengers via voice, audio and text, of detection of toxic gas substances, isolate the cause and provide solutions on how to rectify the danger.

Another unique feature of the unit is that it can be personalized to a specific brand and type of boat. During installation the menu is accessed and the boat make and model selected from a list that contains all major manufacturers. Should your boat not be listed then a simple piece of software allows you to simply and quickly load the specifications.

A further feature is the ability of the unit to be fully integrated with a craft's existing engine, wiring and display systems. Using Cat 5 cabling installation can be completed by the crafts owner

or by authorised installers. The unit also has the ability to isolate and shut off fuel valves if the feature is fitted.

The unit comes standard with 4 sensors, to cater for all sizes of craft, with recommended placement, but can have an additional 32 sensors added. The unit is ideal for pleasure craft, both power and sail, charter boats or commercial craft.

Yachts.

Power Boats.
